PERSONAL PROFILE

First-class BSc Computer Science graduate from UWE Bristol with a strong focus on software development, web technologies and backend systems. Experienced in building full-stack web applications and desktop software using Python, JavaScript, TypeScript and other technologies. Skilled in developing database-driven applications, implementing complex application logic and integrating APIs. Proven ability to deliver independent projects and collaborate on real-world software, including deployed web platforms and production applications.

TECHNICAL SKILLS

- Languages: Python, C, C++, JavaScript, TypeScript, PHP
- Web Technologies: HTML, CSS, React, Node.js, Flask, Django
- Desktop Development: Tauri, React, TypeScript
- Databases: SQLite, MySQL, PostgreSQL, database design
- APIs & Real-Time Systems: REST API integration (Discord API, OpenAI API), WebSockets (Socket.IO), asynchronous programming
- Tools: Git, Docker, VS Code
- Other: Email systems, secure user data handling, audio processing (speech-to-text pipelines), process management (inter-process communication between Node.js and Python)

PROJECTS

Mouse Pad – Desktop Task Organiser

- Designed and developed a desktop task management application using React, TypeScript and Tauri.
- Implemented a local SQLite database to manage tasks, collections and recurring task occurrences, maintaining completion history independently of task definitions.
- Developed a recurring task system supporting daily, weekly and monthly schedules, automatically generating future occurrences.
- Built task management, calendar and statistics pages, including filtering by collection and date range.
- Implemented task archiving, completion tracking and visual statistics to help users organise responsibilities and monitor productivity.
- GitHub repository - https://github.com/ANRogers/Task-Orginiser

Discord Transcription Bot

- Built a Discord bot in Node.js and Python that uses Discord's voice API to capture and transcribe each speaker's audio independently.
- Designed a persistent local transcription service (faster-whisper) to eliminate model-reload overhead across multi-hour sessions, communicating with the bot over a local HTTP interface.
- Implemented an AI-driven pipeline using the OpenAI API to summarize sessions and automatically generate new wiki entries in an Obsidian vault for previously unseen characters, locations, and items.
- Added resilience for long-running sessions, including incremental transcript saving, voice disconnect recovery, and error handling to prevent a single corrupted audio packet from crashing the bot.
- GitHub repository - https://github.com/ANRogers/DndScribe

Art Exhibition Chatbot Website

- Developed a chatbot trained on custom conversational datasets to simulate interactive dialogue
- Built a full-stack application using React (frontend) and Django (backend)
- Collaborated directly with an artist to deliver a system used in multiple exhibitions
- Deployed a live production website for public interaction
- Invited as a guest speaker at UWE Bristol's Arts School Learning & Teaching Day 2026 to discuss the development of the project, its technical implementation, and the collaboration between software development and artistic practice.

- Demo: https://youtu.be/CKU7wvw6F-4
- Website: https://www.everafterai.art

University Social Media Website

- Developed login and account systems, post creation, and display features.
- Implemented email functionality for password resets, email verification, and notifications.
- Contributed to a team project that achieved an 87% grade.
- GitHub repository - https://github.com/ANRogers/Uni-Hub

Customer Restaurant Order Website

- Built customer-facing web pages for ordering and table reservation, linked to an existing EPOS system.
- Used MySQL to interact with backend systems.
- Focused on secure session handling and dynamic content generation.
- GitHub repository - https://github.com/ANRogers/Hoizon-Restaurant-Customer-Website

Restaurant EPOS System

- Developed a restaurant point-of-sale system using Python Tkinter and MySQL.
- Designed and implemented the database schema, improving operational efficiency.
- Strengthened problem-solving skills and teamwork through collaborative development.
- GitHub repository - https://github.com/ANRogers/Horizon-Restaurants-EPOS

Travel Booking Website

- Created a dynamic web platform with Python Flask, MySQL, and HTML/CSS/JS.
- Designed account management with secure password hashing and staff/admin roles.
- Built features for booking management, user dashboards, and secure data handling.

EDUCATION

University of the West of England (UWE Bristol)
Sept 2022 – June 2025
BSc (Hons) Computer Science — **First Class Honours**

Downend School — A Levels
Sept 2019 – Aug 2021
• Computing: A*
• Biology: B
• Physics: C

WORK EXPERIENCE

Pallet Repairer, Penntree Pallets Ltd (Jan 2026 – Oct 2026)

- Maintained consistent quality standards while working in a high-output environment
- Followed structured processes and safety procedures, ensuring reliability and accuracy in daily tasks
- Contributed to workflow efficiency by maintaining organised work areas and meeting production targets

Feedback Spaces Internship, University of the West of England (July 2025 – Aug 2025)

- Developed AI-assisted feedback features to support automated and structured marking workflows for lecturers
- Designed and implemented customizable, modular marking layouts to improve flexibility in assessment design
- Worked with PHP in a live, deployed system, applying good coding practices and maintaining production-ready features
- Gained experience collaborating on real-world software used within a university environment

Store Colleague, Sainsbury's Emersons Green (Sept 2021 – Jan 2026)

- Delivered excellent customer service in a busy environment.
- Enhanced communication, time management, and problem-solving skills.

INTERESTS AND ACHIEVEMENTS

- **Guest Speaker — UWE Bristol Arts School Learning & Teaching Day 2026:** Invited to discuss the development of an interactive chatbot website created for an art exhibition, covering the technical development process, collaboration with the artist, and the challenges of developing technology for an artistic installation.
- **Automotive & Motorcycle Maintenance and Repair:** Diagnose faults and carry out repairs, developing strong practical problem-solving and systems understanding
- **Dungeons & Dragons**: Plan and run weekly sessions, managing groups, designing complex scenarios, and maintaining long-term campaigns
- **3D Printing, Fabrication and Sewing:** Produce and modify prints, miniatures, and props, including functional parts for practical use, developing skills in iterative testing and problem-solving
- **PC Building and Electronics:** Build, upgrade, and repair computer systems, diagnosing and resolving hardware faults while developing a strong understanding of system components
